EDUCATION

University of Washington

Seattle, WA

Bachelor of Science in Computer Science | GPA: 3.91

Sept 2023 – June 2027

Coursework: Distributed Systems, Machine Learning, Reinforcement Learning (grad), Operating Systems, Algorithms, Probability & Statistics, Data Structures & Parallelism, Linear Algebra, Differential Equations, Wireless Communication

EXPERIENCE

Cockroach Labs

June 2026 – Present

Software Engineer Intern, KV Team

New York, NY

- Extending KVNemesis (CockroachDB's randomized consistency checker) to cover our new storage layer; found and fixed a changefeed data-loss bug caused by incorrect storage-engine usage
- Adding storage-level fault injection (simulated crashes and partitions) to KVNemesis to test serializability under failure
- Present progress directly to the CTO in storage layer meetings

Amazon Web Services

May 2025 – August 2025

Software Development Engineer Intern

Seattle, WA

- Built a serverless, AI-powered system to automate onboarding new AWS resource types (RTs) to AWS Config — a **day-long manual process now 2 minutes**. Invoked via ApiGateway endpoint, outputs in Dynamo, S3
- Grounded Bedrock LLMs in RT documentation to author XML specs with per-resource-type dynamic tags/attributes and JSLT transformations for mapping “describe” API responses into standardized AWS Config configuration items.
- Created feedback loop with existing tests to let LLM self-correct until specs passed. On **30 RTs, 100% test accuracy**.

Dartmouth Health

June 2024 – Sept 2024

Machine Learning Intern

Hanover, NH

- Assessed literature, designed, and trained a BERT based model for Named Entity Recognition (NER) of phenotypes in clinical notes with PyTorch — evaluated by a geneticist to automate **80% of manual annotation work**.
- Combined techniques from **state-of-art models PhenoBCBERT & PhenoID**: IOB labeling for more reliable annotations, window+striding for larger context, and 2nd finetuned BERT to normalize to phenotype IDs in ontology.
- Deployed Flask microservice/API to serve model, with React **user-friendly annotation interface** for error correction

Dubhacks NEXT

June 2024 – Present

Co-Managing Director

Seattle, WA

- Organize UW's student-run startup incubator; our startups have **raised \$2M cumulatively**, multiple at YCombinator
- Lead sponsorship outreach, secured **\$35K from Amazon, Hashicorp, PackVC, Madrona Ventures** over 2 years

PROJECTS

Distributed Key-Value Store | Java

March 2026

- Built a **linearizable KV store sharded** across Multi-Paxos replica groups with a dedicated controller for rebalancing
- Implemented fault-tolerant consensus (leader election, log replication, garbage collection) under adversarial network conditions (loss, delay, duplication)

Renaissance Research | Python, Beautiful Soup, AWS Bedrock, Gemini, Pydantic, Next.js

April 2025

- Built a system that scrapes old, niche research papers and uses multi-agent LLM pipelines (critic/optimist/judge roles) via Bedrock/Gemini to evaluate them for potential modern applications
- Won grand prize at Caltech Hackathon (\$25,000 OpenAI credits, NVIDIA RTX 5070 GPUs)

Roulette | Javascript, Webassembly, Rust, HTML, CSS

Jan 2024 – June 2024

- Built service for websites to **monetize by lending visitors' compute** for large parallel Monte Carlo Simulations
- Sped up simulation code **20x faster than JavaScript** with WebWorkers running WebAssembly compiled from Rust

TECHNICAL SKILLS

Language/Framework: Java, Python, C/C++, JavaScript/TypeScript, Go, HTML/CSS, Node.js, React, Svelte, Express
Technologies/Libraries: Git, Docker, AWS, Unit Testing | NumPy, tensorflow, Torch, transformers, Matplotlib, scikit-learn
